

## Installation Instructions

If you prefer to watch our video tutorial walking you through the installation process, it's available at the following location.

### Video Tutorial for Installation

[http://www.idevdirect.com/video\\_tutorials.php?tab=2&video\\_id=200](http://www.idevdirect.com/video_tutorials.php?tab=2&video_id=200)

1. Create a new MySQL database (naming it iDevAffiliate is fine). This is typically done at the command line or via a web hosting control panel if your web hosting service provides one.
2. Create a directory in your document root that will be used as your affiliate program location.
  - We highly recommend installing into a top level directory such as: [/idevaffiliate/](#)
  - Example: public\_html/idevaffiliate or http/idevaffiliate (each server looks different).
3. If you named your folder **idevaffiliate**, skip this step. Otherwise, open the [/API/install\\_folder.php](#) file and adjust the name of the installation folder.

```
$install_directory_name = "idevaffiliate";
```

4. Using your favorite FTP program, upload all of the iDevAffiliate files in their present folder structure to your web hosting account (into your newly created folder from step #2 above).

#### Important:

Use AUTO-DETECT mode when uploading files. Images need uploaded in BINARY. All other files need uploaded in ASCII. Using AUTO-DETECT mode will automatically handle this for you.

5. From your web browser, run the install program.

<http://www.yoursitenamehere.com/idevaffiliate/install/index.php>

Be sure to adjust the above path to match your actual location of iDevAffiliate.
